

Penetrating Oil

Professional Mechanics Formula Penetrating Oil!

Promech® Penetrating Oil is faster acting and more effective at freeing up rusted, corroded, or seized fasteners and parts than anything currently available.

Promech Penetrating Oil is shown to work very well in cases of "galvanic corrosion of dissimilar metals," such as the seizing of a steel bolt in an aluminum block.

Promech Penetrating Oil is not only used for removing stubborn parts, but also is good for protecting against rust and cleaning metal.

Promech

- Fast acting and more effective
- Frees up rusted, corroded, or seized parts.
- Works very well in cases of galvanic corrosion.
- Designed to penetrate nuts, bolts, & threaded components.
- Also good for protecting against rust and cleaning metal.
